## Rationale

In a world of increasing global integration and international mobility, it is critical to the wellbeing and sustainability of the environment and society that young Australians develop a holistic understanding of the world. This requires deep knowledge and understanding of why the world is the way it is and the interconnections between people, places and environments over time.

The Australian Curriculum: Geography empowers students to shape change for a socially just and sustainable future. Geography inspires curiosity and wonder about the diversity of the world’s places, peoples, cultures and environments. Through a structured way of exploring, analysing and understanding the characteristics of the places that make up our world, Geography enables students to question why the world is the way it is, and reflect on their relationships with and responsibilities for that world.

Geography teaches students to respond to questions in a geographically distinctive way: plan inquiries; collect, evaluate, analyse and interpret information; and suggest responses to what they have learnt. Geography provides students with opportunities to develop a wide range of general skills, capabilities and dispositions that can be applied in everyday life and at work. The subject helps students to develop information and communication technology skills; an appreciation and respect for social, cultural and religious diversity and different perspectives; an understanding of ethical research principles; a capacity for teamwork; and an ability to solve problems and to think critically and creatively.

Geography helps students to be regional and global citizens capable of active and ethical participation.

## Year 7 Achievement Standard

By the end of Year 7, students describe geographical processes that influence the characteristics of places and how the characteristics of places are perceived and valued differently. They explain interconnections between people and places and environments and describe how these interconnections change places and environments. They describe alternative strategies to a geographical challenge referring to environmental, economic and social factors.

Students identify geographically significant questions to frame an inquiry. They evaluate a range of primary and secondary sources to locate useful information and data. They record and represent data and the location and distribution of geographical phenomena in a range of forms, including large-scale and small-scale maps that conform to cartographic conventions. They interpret and analyse geographical maps, data and other information to propose simple explanations for spatial distributions, patterns, trends and relationships, and draw conclusions. Students present findings and arguments using relevant geographical terminology and digital technologies in a range of communication forms. They propose action in response to a geographical challenge, taking account of environmental, economic and social factors, and describe the expected effects of their proposal.

## Key Inquiry Questions

**Year 7 Key Inquiry Questions for Geography**

1. **What approaches can be used to improve the availability of resources and access to services?**
2. **How do people’s reliance on places and environments influence their perception of them?**
3. **What effect does the uneven distribution of resources and services have on the lives of people?**

## Year 7 Level Description

There are two units of study in the Year 7 curriculum for Geography: ‘Water in the world’ and ‘Place and liveability’.

### Water in the World

- **Aims**
  - A sense of wonder, curiosity and respect about places, people, cultures and environments throughout the world.
  - A deep geographical knowledge of their own locality, Australia, the Asia region and the world.
  - The ability to think geographically, using geographical concepts.
  - The capacity to be competent, critical and creative users of geographical inquiry methods and skills.
  - As informed, responsible and active citizens who can contribute to the development of an environmentally and economically sustainable, and socially just world.

- **Rationale**
  - Understanding of why the world is the way it is and the interconnections between people, places and environments.
  - Explanation of geographical challenges referring to environmental, economic and social factors.

### Place and Liveability

- **Aims**
  - Students examine how individuals and groups have participated in and contributed to society past and present. They examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
  - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.

- **Rationale**
  - Understanding of ethical research principles; a capacity for teamwork; and an ability to solve problems and to think critically and creatively.

## Study Outline

**Water in the World**

1. **Who we are, who came before us, and traditions and values that have shaped societies**
   - Students learn about Australian society and other societies in the world, both past and present; and how they function socially, culturally, economically and politically.
   - Students examine developments that have resulted in or are bringing about change.

2. **The ways people, places, ideas and events are perceived and connected**
   - Students are provided with opportunities to explore different perceptions of people, places, ideas and events. They develop an understanding of the interdependent nature of the world and the interrelationships within and between the natural environment, human communities and economies.
   - Students explore how people, ideas and events are connected over time and increasingly interconnected across local, national, regional and global contexts.
   - Students examine how individuals and groups have participated in and contributed to society past and present.
   - Students examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
   - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.

3. **How people exercise their responsibilities, participate in society and make informed decisions**
   - Students learn about Australian society and other societies in the world, both past and present; and how they function socially, culturally, economically and politically.
   - Students examine developments that have resulted in or are bringing about change.
   - Students are provided with opportunities to explore different perceptions of people, places, ideas and events. They develop an understanding of the interdependent nature of the world and the interrelationships within and between the natural environment, human communities and economies.
   - Students explore how people, ideas and events are connected over time and increasingly interconnected across local, national, regional and global contexts.
   - Students examine how individuals and groups have participated in and contributed to society past and present.
   - Students examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
   - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.

**Place and Liveability**

1. **Aims**
   - Students examine how individuals and groups have participated in and contributed to society past and present. They examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
   - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.

2. **Rationale**
   - Understanding of ethical research principles; a capacity for teamwork; and an ability to solve problems and to think critically and creatively.

## Key Ideas

- **Who we are, who came before us, and traditions and values that have shaped societies**
  - Students explore their own identity, Australia’s heritage and cultural diversity, and Australia’s identity as a nation in the world. They examine the significance of traditions and shared values within society.
  - How societies and economies operate and how they are changing over time
  - Students learn about Australian society and other societies in the world, both past and present; and how they function socially, culturally, economically and politically.
  - Students examine developments that have resulted in or are bringing about change.
  - The ways people, places, ideas and events are perceived and connected
  - Students are provided with opportunities to explore different perceptions of people, places, ideas and events. They develop an understanding of the interdependent nature of the world and the interrelationships within and between the natural environment, human communities and economies.
  - Students explore how people, ideas and events are connected over time and increasingly interconnected across local, national, regional and global contexts.
  - Students examine how individuals and groups have participated in and contributed to society past and present.
  - Students examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
  - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.

## Study Outline

**Place and Liveability**

1. **Aims**
   - Students examine how individuals and groups have participated in and contributed to society past and present. They examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
   - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.

2. **Rationale**
   - Understanding of ethical research principles; a capacity for teamwork; and an ability to solve problems and to think critically and creatively.

## Key Ideas

- **Who we are, who came before us, and traditions and values that have shaped societies**
  - Students explore their own identity, Australia’s heritage and cultural diversity, and Australia’s identity as a nation in the world. They examine the significance of traditions and shared values within society.
  - How societies and economies operate and how they are changing over time
  - Students learn about Australian society and other societies in the world, both past and present; and how they function socially, culturally, economically and politically.
  - Students examine developments that have resulted in or are bringing about change.
  - The ways people, places, ideas and events are perceived and connected
  - Students are provided with opportunities to explore different perceptions of people, places, ideas and events. They develop an understanding of the interdependent nature of the world and the interrelationships within and between the natural environment, human communities and economies.
  - Students explore how people, ideas and events are connected over time and increasingly interconnected across local, national, regional and global contexts.
  - Students examine how individuals and groups have participated in and contributed to society past and present.
  - Students examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
  - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.

## Study Outline

**Place and Liveability**

1. **Aims**
   - Students examine how individuals and groups have participated in and contributed to society past and present. They examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
   - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.

2. **Rationale**
   - Understanding of ethical research principles; a capacity for teamwork; and an ability to solve problems and to think critically and creatively.

## Key Ideas

- **Who we are, who came before us, and traditions and values that have shaped societies**
  - Students explore their own identity, Australia’s heritage and cultural diversity, and Australia’s identity as a nation in the world. They examine the significance of traditions and shared values within society.
  - How societies and economies operate and how they are changing over time
  - Students learn about Australian society and other societies in the world, both past and present; and how they function socially, culturally, economically and politically.
  - Students examine developments that have resulted in or are bringing about change.
  - The ways people, places, ideas and events are perceived and connected
  - Students are provided with opportunities to explore different perceptions of people, places, ideas and events. They develop an understanding of the interdependent nature of the world and the interrelationships within and between the natural environment, human communities and economies.
  - Students explore how people, ideas and events are connected over time and increasingly interconnected across local, national, regional and global contexts.
  - Students examine how individuals and groups have participated in and contributed to society past and present.
  - Students examine the rights and responsibilities of individuals and groups over time and in different contexts. They develop an understanding of the need to make decisions, the importance of ethical considerations and being informed when making decisions.
  - The processes for decision-making and implications of decisions that are made for individuals, society, the economy and the environment.
**Structure**

In the Australian Curriculum, the Humanities and Social Sciences learning area comprises five subjects: F–6/7 Humanities and Social Sciences, and Years 7–10 History, Geography, Civics and Citizenship and Economics and Business. In all five subjects, the curriculum is organised into two broad interrelated strands: knowledge and understanding, and inquiry and skills. In the F–6/7 Humanities and Social Sciences curriculum, history, geography, civics and citizenship and economics and business are presented as sub-strands of the knowledge and understanding strand. In these years, students are introduced to history and geography from Foundation Year, civics and citizenship in Year 3 and economics and business in Year 5. In Years 7–10, the curriculum is organised by subject. In Years 9 and 10, student access to Geography, Civics and Citizenship and Economics and Business will be determined by school authorities or individual schools.

**Year 7 Content Descriptions**

<table>
<thead>
<tr>
<th>Geographical Knowledge and Understanding</th>
<th>Geographical Inquiry and Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Water in the world</strong>&lt;br&gt;Classification of environmental resources and the forms that water takes as a resource.&lt;br&gt;The way that flows of water connects places as it moves through the environment and the way this affects places.&lt;br&gt;The quantity and variability of Australia’s water resources compared with other continents.&lt;br&gt;The nature of water scarcity and ways of overcoming it, including studies drawn from Australia and West Asia and/or North Africa.&lt;br&gt;Economic, cultural, spiritual and aesthetic value of water for people, including Aboriginal and Torres Strait Islander Peoples and peoples of the Asia region.&lt;br&gt;Causes, impacts and responses to an atmospheric or hydrological hazard.</td>
<td><strong>Observing, questioning and planning</strong>&lt;br&gt;Develop geographically significant questions and plan an inquiry, using appropriate geographical methodologies and concepts.</td>
</tr>
<tr>
<td><strong>Place and liveability</strong>&lt;br&gt;Factors that influence the decisions people make about where to live and their perceptions of the liveability of places.&lt;br&gt;The influence of accessibility to services and facilities on the liveability of places.&lt;br&gt;The influence of environmental quality on the liveability of places.&lt;br&gt;The influence of social connectedness and community identity on the liveability of place.&lt;br&gt;Strategies used to enhance the liveability of places, especially for young people, including examples from Australia and Europe.</td>
<td><strong>Collecting, recording, evaluating and representing</strong>&lt;br&gt;Evaluate sources for their reliability and usefulness and select, collect and record relevant geographical data and information, using ethical protocols, from appropriate primary and secondary sources.</td>
</tr>
<tr>
<td><strong>Interpreting, analysing and concluding</strong>&lt;br&gt;Interpret geographical data and other information using qualitative and quantitative methods, and digital and spatial technologies as appropriate, to identify and propose explanations for spatial distributions, patterns and trends, and infer relationships.</td>
<td><strong>Represent data in a range of appropriate forms, for example climate graphs, compound column graphs, population pyramids, tables, field sketches and annotated diagrams, with and without the use of digital and spatial technologies.</strong></td>
</tr>
<tr>
<td><strong>Represent spatial distribution of different types of geographical phenomena by constructing appropriate maps at different scales that conform to cartographic conventions, using spatial technologies as appropriate.</strong></td>
<td><strong>Communicating</strong>&lt;br&gt;Present findings, arguments and ideas in a range of communication forms selected to suit a particular audience and purpose; using geographical terminology and digital technologies as appropriate.</td>
</tr>
<tr>
<td><strong>Reflecting and responding</strong>&lt;br&gt;Reflect on their learning to propose individual and collective action in response to a contemporary geographical challenge, taking account of environmental, economic and social considerations, and predict the expected outcomes of their proposal.</td>
<td><strong>Represent spatial distribution of different types of geographical phenomena by constructing appropriate maps at different scales that conform to cartographic conventions, using spatial technologies as appropriate.</strong></td>
