

# F – 2 Science Placemat

We can ask these questions to help us think, work and process like a scientist.

## What do you notice?

What do you see?  
What do you hear?  
What do you smell?  
What do you taste?  
What do you feel?

What does it do?

What is happening?

What is interesting?

## What do you think?

What is the same?

What is different?

How does it change?

Is there anything unusual?

What questions do you have?

What else is it like?

## What do you think if?

What might happen if?

What if I changed something?

What might happen if something was different?

Can you predict what might happen?

## How can you explore?

How are you going to find out?

Investigate.

What ideas do you have?

What could you try?

How could you test your idea?

What might a scientist do to find out about that?

## How can you share?

How could you share what you noticed?

How could you draw that?

Did others think the same as you? How?

Was this the same as your prediction?

## So what?

Where might you use this information?

Who might be interested in this information?

Why might someone be interested in this information?
